Getting started with BM Player

Everything you need before you start: your account, linking your device and the main features.

BM Player • User guide

BM Player works on Amazon Fire TV, Android TV boxes, Android phones, Windows PCs and Macs. You need a BM Support website account and an active subscription.

Link your device

1. Open BM Player. After the opening video it shows a six-digit link code.

2. On the BM Support website, open Link Device from the side menu and type the code. Your VPN must be off while linking.

3. The player shows the family picture with Checking your linked device, then Go to home screen.

4. Type your six-digit account number when the app asks.

Using BM Player

• Live TV: pick a category, then a channel. The guide shows what's on Now and Up next.

• Sports Guide: shows event days only. Event channels list the event names at their start times.

• Movies and Series: watched bars show your progress; choose Resume to carry on. Rate films and series with 1–5 stars.

• Reminders: press the bell on a guide programme and confirm in the pop-up.

• Favourites: saved favourites appear on every device you use.

• Multi-screen: Multi Room and Triple Room accounts can watch 2 or 3 screens. Click or select a screen to move the sound to it.

• Settings: rearrange categories, view your account info and connection count, and check for updates.

Household rules

Multi Room and Triple Room are for one home. One box can be used away from home, and only one mobile connection per account is allowed. A VPN is fine while watching.

Need help?

Raise a support ticket from the website during office hours and a member of staff will help.
