Amazon Fire TV — Install BM Remote Helper

Download and install the official TV helper, prepare Fire TV permissions and complete remote-control setup.

1. Download the TV app

01 Prepare your devices

Have the Fire TV/Firestick awake, its normal remote, internet access, and a phone or computer signed in to BM Support. Use the Amazon/Fire TV download and guide, not the Android/Google TV instructions. Installation and screen-share consent are separate.

02 Get the official current app

Sign in at bmsupport.uk, open Install Guides, then Download BM Support Apps. Find the current remote app (listed as BM Support Remote). Press Request download link, then View download options. Use the current official link; if it has expired, request a fresh one. Do not use APKs from unrelated websites.

03 Download on the Fire TV

On the TV, open Downloader. If it is not installed, get Downloader from the TV's app store first, open it and accept its initial prompts. On your phone, display the official download options, then type the complete download URL into Downloader on the TV and select Go. Wait for the download to finish. Do not enter the TV's six-digit pairing code here: this field needs the download URL.

04 Allow installation and open the app

If installation is blocked, open Settings > My Fire TV > Developer options > Install unknown apps and switch on Downloader (or the app named in the prompt). Older Fire OS versions use Apps from Unknown Sources. If Developer options is hidden: Settings > My Fire TV > About, highlight the device name and press Select seven times, then go Back. Return to Downloader and choose Install. Select Open when installation finishes.

Amazon Fire TV — Installation

2. Prepare the Helper and remote control

05 Check the app you opened

The remote package is currently listed as BM Support Remote in the download list; the TV help screen is BM Remote Helper. If the downloaded build instead opens the BM Support app and offers Install Remote Helper, use that in-app installer and approve Install. Do not use the removed standalone customer-helper page.

06 Complete helper installation prompts

Follow the helper’s installation/setup prompts for BM Remote Control if offered. If asked to allow this app to install another app, enable the specifically named source, return and approve the installation. Do not repeatedly re-download the APK while an active share is running.

07 Prepare Amazon’s external Enabler

Newer Fire OS blocks the TV from enabling its own remote control. Use the separate Amazon Fire TV — Install and Set Up BM TV Enabler guide on an Android phone on the same Wi-Fi. Turn ADB debugging ON on the TV and follow the phone’s instructions; ADB debugging alone does not mean remote control is ready.

08 Check successful setup

Finish only when the phone Enabler confirms Remote control is on. Reopen BM Remote Helper on the TV and verify it displays the TV’s address and a six-digit pairing code. Note the address for setup and the code for a help session: they serve different purposes.

3. Ready checks and installation troubleshooting

09 Keep the correct apps

Keep BM Remote Helper and BM Remote Control installed. BM TV Enabler stays on the Android phone. Do not install the Enabler on the TV or expect it to replace the Helper. Once installation is complete, optional unknown-source permissions can be turned off until the next update.

10 If installation is blocked

Recheck Install unknown apps for the source actually doing the install. If Install/Open is off-screen, scroll the installer. If an existing install causes a signature/version conflict, stop sharing and contact BM Support before uninstalling, because uninstalling clears setup.

11 If remote control is not ready

Complete the separate Enabler guide, including the TV debugging approval. If the TV's address is missing, check its network connection and reopen the helper. If it remains missing, ask staff; do not guess an address. Android/Google TV Accessibility instructions are not the Amazon workaround.

12 Move on to everyday use

Use Amazon Fire TV — Use Remote Help for staff invitation, six-digit code entry, TV approval, screen sharing, chat and ending a session. A successful install does not grant staff permanent access. Only share with BM Support staff through your own support ticket or secure order. Do not post your TV code publicly. Anything visible on the TV may be seen by staff: close banking, payment, password and other private screens first. You can decline a request or end a session.
